## **ASX ANNOUNCEMENT**

### **New Zealand Huinga 1B-ST Drilling and Project Status Report**

**EP 38716, Taranaki Basin.**

**Pancontinental: 6.6%**

At 0600 hrs, 3 July 2002, operations to clean up the hole following cementing the 7inch casing liner at a depth of 4390 metres were underway. Following clean-up operations it is anticipated that the Joint Venture will elect to drill out of the cased hole and evaluate the Kapuni sandstones with logs and possible Drill Stem Tests.

A testing program is being formulated to evaluate the extent of hydrocarbons in both the Kapuni formation sandstones and the extensive fractures within the Murihiku Group metasediments.

As reported previously, strong mud gas shows commenced at 3828m, and further strong gas shows with associated live oil shows were recorded over a 237 meter gross interval while drilling from 4263m down to 4500 metres in Murihiku fracture zones and Kapuni sandstones. The top of the Kapuni Group is interpreted from drilling data at 4378 metres.

Hydrocarbons are produced at commercial rates from Kapuni sandstone reservoirs as well as the Tariki sandstones in the Taranaki basin. Internationally, and within Australia, many large commercial oil and gas fields produce from fractured reservoirs.

PEP 38716 hosts all or part of three structures related to the eastern bounding fault of the Taranaki Basin, all being similar to that of the major Rimu/Kauri oil and gas discovery 18 kilometres south which is currently under development. The structures are named Huinga and Huinga South, both entirely within the Permit, and Makino, which is partly within the Permit but mostly within PEP38728, which adjoins to the south. The primary producing zone of the Rimu/Kauri fields are units of the Tariki Formation.

Four kilometres immediately to the west of Huinga are the Tariki, Ahuroa, oil and gas fields which produce from the Tariki formation.

**Huinga 1B commenced re-entry:** 8 April 2002.

**Location of well:** NZMG: 2 631 910.93 mE.  
6 205 424.34 mN.

**Operation since last report:** Commence and proceed with cementing operations.

**Drilling Rig:** Parker Rig -188.

**Proposed Total Depth:** 4,500 metres – subject to deepening.

**Primary Objectives:** Fracture zones within the Murihiku Group.  
Sandstones units of the Kapuni Group.

**Last hydrocarbon indications:** Significant amounts of waxy crude and gas recorded at surface while circulating the hole and conditioning mud prior to casing.

Note: All reported depths are referred to the rig rotary table (mAHBRT).

<i>(ASX* listed) Participants in the PEP 38716 Joint Venture are:</i>	<i>Equity %</i>
<b>*Pancontinental Oil &amp; Gas NL</b> (through subsidiary Euro Pacific Pty Ltd)	<b>6.6%</b>
*Marabella Enterprises Ltd (Operator) (Subsidiary of Bligh Oil & Minerals NL)	24.8%
*AWE (New Zealand) Pty Ltd. (Subsidiary of Australian Worldwide Exploration Ltd.)	12.5%
*Springfield Oil & Gas Ltd (1) (Subsidiary of Impress Ventures Ltd )	4.8%
Preussag Energie GmbH	24.00%
Swift Energy NZ Limited	15.00%
Indo Pacific Energy (NZ) Limited	7.30%
PEP38716 Limited	5.00%

(1)Subject to Joint Venture and government approvals; Springfield Oil & Gas Limited is a wholly owned subsidiary of Impress Ventures Ltd.
